

Support Resistance - Dynamic v2  
LonesomeTheBlue Eyl 11, 2020

Volatility Support and Resistance Pivot Points trendtrading trendfollowing pivotsupport Daily Pivots Supply Zone  
Fibonacci Retracement lonesometheblue

Eyl 11, 2020 Hello Traders!

After the addition of "Arrays" to the Pine, I developed new and improved version of **Support Resistance - Dynamic** script as version 2. In this script Arrays were used. This can be used as Support Resistance tool, also it will be an example for the people who want to learn Array usage in Pine. Many thanks to Pine Team for adding Arrays!

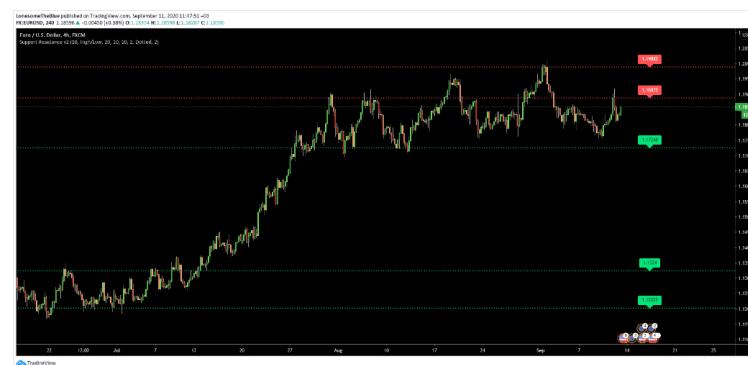

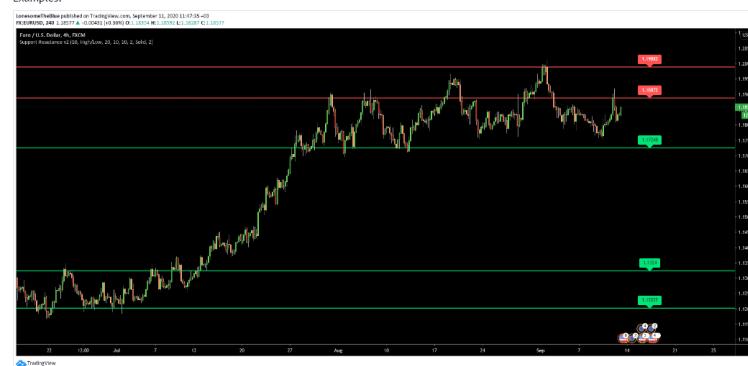

The script finds the **Pivot.Points** and check them in channels if there can be S/R or not, and draws mid line of the channel as S/R line, you can set number of **PPs** and channel width in the options. Each channel width is optimized dynamically according to **Pivot.Points**. Also you can choose "**High/Low**" or "**Close/Open**" as source for **Pivot.Points**.

There is an option for maximum number of S/R levels. S/R levels are found and sorted dynamically and number of S/R lines with enough strength changes dynamically.

Some other options for coloring and line width. (**Solid, Dashed or Dotted**)

S/R levels are shown in the Labels and Label colors are changed automatically, if S/R line is below the closing price then its color is Green (as Support), otherwise its color is Red (as Resistance).

Examples:

Enjoy!

Eyl 29, 2020 Sürüm Notları: Alerts added.

Eyl 30, 2020 **Sürüm Notları:** Color option added for S/R, you can set any color you want ;)

Ara 7, 2020 **Sürüm Notları:** when the market is closed, labels appears on last candles. so I tried to add a condition to check if the market is open/closed and change the location of labels if the market is closed.

If it detects the market is closed then it shows the labels on 100. bars:

Şub 10, 2021 **Sürüm Notları:** Added rates between Price and S/R levels into the labels like (3.27%) or (-1.64%) and now label directions (Up/Down) change dynamically according to the Price

Eki 3, 2021 **Sürüm Notları:** Arrays used for the lines and labels (instead of individual variables) options added for the label location, if you enter positive numbers (20, 50, etc) then labels are shown on future bars, if you enter negative numbers (-100, -60 etc) then labels are shown on historical bars round\_to\_mintick function used transp removed options re-organized

Example: Label location = -100 (labels shown on last 100. bar)

Eki 5, 2021 **Sürüm Notları:** the code improved

what settings you can recommend for 5 min TF ? thnx

+42 ▲ Cevap Gönder

LonesomeTheBlue WIZARD · Eyl 11, 2020

@sytnykk, it looks default settings are good but different settings should be better for different securities (FX pairs, stocks, indices etc), there is no workaround about it, you need to find best settings for yourself.

+7 ▲ Cevap Gönder

S sytnykk · Eyl 11, 2020

@LonesomeTheBlue, big thanks the same question so as not to repeat - your Indicator Support and Resistance MTF - any recommends for 5m TF ?

Amazing indicator. I just wanted to know that does the pivot period mean pivots based on number of days, meaning if it is 10 does it mean it is calculating pivots based on last 10 days? And what is the best pivot period for 5 mins forex trading? Waiting for a revert.

+6 ▲ Cevap Gönder

B BlueChipMutt PRO+ · Eyl 11, 2020

Thanks, LTB. I have noticed significant differences from version 1, the horizontal lines are plotted at completely different prices. What causes these differences ?

+4 ▲ Cevap Gönder

 WillBeDeletedSoon · EYL 12, 2020     
@BlueClipMutt, True even I noticed the same thing. In this indicator it's taking mid level of up\_level & dn\_level but still there are difference in prices compare to old one. Also the SR lines are less compared to old indicator.

Hope so @LonesomeTheBlue will tell us how the new indicator plots and works. Overall in love with LTB work and his indicator.

+3 ▲ Cevap Gönder

 LonesomeTheBlue  · EYL 12, 2020     
@RejectedTraders, @BlueClipMutt yes there are differences. In previous S/R dynamic script, It finds all S/R lines and draws the all S/R lines if its strength is higher than a value the user set, but in this version it sorts S/R lines according to their strengths and show the S/R lines with maximum strength, how many of them is shown is set by the user as an option (Maximum Number of S/R), and in previous one upper/lower S/R channel was static, but in this version it's dynamic according to pivot points that may fit in this channel. I created and developed S/R dynamic and this improved S/R dynamic v2. I do believe this one has better performance, finally your choice, good luck :)

+2 ▲ Cevap Gönder

 WillBeDeletedSoon · EYL 12, 2020     
@LonesomeTheBlue, Possible to add zones color?  
As right now you plot the mid level of sr\_up\_level and sr\_dn\_level  
So how can we add colors to have zone created and continue to have the midline shown as it is. As it will give us buffer points to place our trades.

+2 ▲ Cevap Gönder

 LonesomeTheBlue  · EYL 12, 2020     
@RejectedTraders, first I made it as zones but didn't like it and changed, I can add zones as an option if I have time.  
▲ Cevap Gönder

 WillBeDeletedSoon · EYL 12, 2020     
@LonesomeTheBlue, If you can tell in short how it can be done then I will do it for the indicator that I have merged with. Thanks

Wow, that is an improvement to the previous version! Great work!  
One question tho, I'm trying to figure out how to extend it to check for a broken S/R line. Could you help me or point me in the direction where to add this function? Would appreciate it a lot! Thanks buddy

Hi, I am using Support Resistance Dynamic Indicator & it gives me excellent S/R supports.  
Would like to know, there is something " RS Level " in the setting (Style).  
What does it mean? Is it RSI level or is it Relative Strength showing +ve & -ve to relative benchmark index?

Please guide.  
Thank you.

Small question,  
Could you add the options.

1. A separate setting for the maximum amount of each type of S/R lines. Sometimes to get a particular pivot you have to set the pivot period lower. Which in some cases causes the creation of a bunch of extra support/resistance lines (in my case I had to set for 10 s/r lines causing the creation of extra unwanted support lines)

2. Visual settings (option to change the following)  
- Flag Colors  
- Color of text in flags (nice touch on using different color to differentiate)  
- Line type (lines, dashed & dotted) & thickness  
- H/L pivot marker colors  
- ability to have flags go right (current options above and below the bar)

Also this Indicator is awesome!!!! A majority of S/R indicators just spam charts with lines everywhere, this just shows what you need!

I hope this group can help me , so i have used this for a while but honestly lack some basic understanding of a few things with the tool. Here are those things and maybe you all can answer..

1 . how do i reset it to its "factory" settings . in case i have set a setting i dont like?  
2. the 4-5 bars that show up (green or red) i know what those mean, i assume the duration of my tradingview chart dictates the duration of the S + R bands ?  
3. im looking at amzn for example for 1 day chart 1 min interval. it has 4 red bars on screen. i have always seen a brown somewhere. does that mean its broken through all 4 support bands for that 1 day ? morally i can like t

green 4 reds etc. just wondering if I broke something  
4. what is a pivot period?  
lets start there and your help is GREATLY APPRECIATED !

 JohnWick\_crypto **PREMIUM** · Tem 1, 2021  

This is an incredible indicator!! Unbelievable really

Is there a way to set alerts so that the support/resistance is differentiated?

Support "1" broken  
Support "2" broken

Resistance "1" broken  
Resistance "2" broken

Anything like that? Right now it only has "Support Broken" and "Resistance Broken" but will often trigger constantly when price is consolidating around one of these levels

This is a very cool indicator. Thank you for sharing!

Just a thought: Would it be possible to incorporate a Fibonacci function to possibly 'predict' future levels on a rising chart with no prior price levels that high?  
The reason I ask this is that the very first chart I applied the indicator to, created levels that looked intuitively fib spaced... so I added one to the chart.  
0, 0.236 & 0.5 all lined up surprisingly well to the levels produced and as such, 1.618 and even 1 itself are above the current price....!?

I will leave the chart this way (cant share screenshots in Comments) and update if anything of note happens!

This might require some form of AI, which despite TV's greatness, has not been developed yet... I dont think! :)
