@HPotter can you plz confirm what is the best time frame for this Trend TS?
Thank you in advance

A amanchaure PRO · May 9 ☰

@diazifx, This is a very good indicator. But you must back test your strategy by using this indicator on the past data for multiple time frames (3, 5, 15 mins) and then decide which setting suits your trading style (This will also help you to decide whether to go for intraday or a swing Trading pattern). Once you are done with that, take some paper trades (atleast 50) in the live market (maybe for a complete month) and check your profits along with the accuracy. If there is an overall loss then just sit back relaxed and thank yourself for not trusting blindly over any indicator and try to figure out what went wrong in your experiment. Change the settings and repeat the same Experiment over and over again (try to add a few more confirmations to reduce the losses) and one day you will definitely find an overall pattern in which these indicators work.
If there are 100 people who make profit using this indicator, then there will be atleast 200 people making losses with the same (lack of consistency and discipline).

I'm trying to write this indicator in Google Sheets to backtest it faster. I can't seem to do the second part where you compare the high and low limit to the close to determine the trend. Do you think you would be able to help with that?

Also second question, the article says that to calculate the high and low limit you need to use in an uptrend the highest high during that uptrend (and lowest low during a downtrend), but the way it is written now isn't it taking the highest high or lowest low of the 21 last bars?

Hi. It is possible to add Red/Blue colours when the Trend Trader indicator changes the direction from Bullish to Bearish and the other way around? Sometimes it is quite confusing to identify in what side of the trade I need to be using this indicator. Best regards.

Hi, do you know if on tradinview you can test the strategy automatically? Usually as you use it, I noticed that it works well with very strong trends, but it doesn't work if it lateralizes. pair this strategy with other indexes?

Hi,
Thanks for this.
Don't know how to code and hoping you can help.
Just wondering if you can make a V2 that adds another line "hilimit/olimit" but with another multiplier (i.e 2)

The purpose of which could be for getting out of the trade quicker or adding to positions if price bounces off this new line.

regards
