

Fixed a typo in the code where BB multiplier was stuck at 1.5. Thanks @ucsgears for bringing it to my notice.

Updated source: <http://pastebin.com/UCpcx8d7>

Use the updated source instead of the what TV shows below.

This is a derivative of John Carter's "TTM Squeeze" volatility indicator, as discussed in his book "Mastering the Trade" (chapter 11).

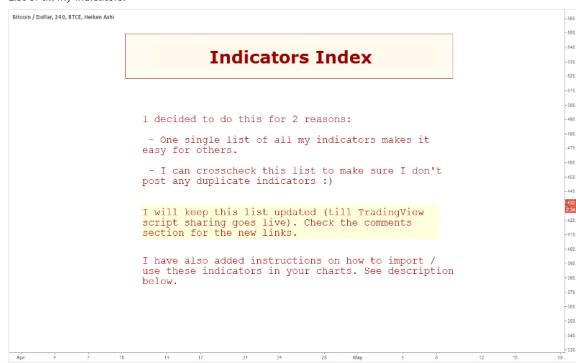

Black crosses on the midline show that the market just entered a squeeze (Bollinger Bands are within Keltner Channel). This signifies low volatility, market preparing itself for an explosive move (up or down). Gray crosses signify "Squeeze release".

Mr.Carter suggests waiting till the first gray after a black cross, and taking a position in the direction of the momentum (for ex., if momentum value is above zero, go long). Exit the position when the momentum changes (increase or decrease ... signified by a color change). My (limited) experience with this shows, an additional indicator like ADX / WaveTrend, is needed to not miss good entry points. Also, Mr.Carter uses simple momentum indicator, while I have used a different method (linreg based) to plot the histogram.

Hi Hope you are well,

This Strategy is looking so much interesting but anyone can explain me for following questions So It will be easy for everyone to follow this strategy.  
If anyone have Video then it will be great or I can make video for everyone if @Leazy Bear is happy to use his page on video?

I have given answer but not 100% sure that are these correct or not?

- 1) What should be starting point. (First Grey after black)
- 2) What should be close point. (First Colour Change after start)
- 3) Should I buy or Sell? (Light Green - Buy, Dark Green Sell, Light Red Sell, Dark Red Buy)
- 4) What time should be great for selecting chart for this strategy? (1 Min, 3 Min, 5 Min, 1 Hour, 1 day or something else?)
- 5) Is this strategy is useful for Binary Trading? (If yes then what should be Indicators)
- 6) Why colour is changing sometime dark red to Red or green to dark green.
- 7) Can we start on dark Green and Close on Dark red?
- 8) Can we start on dark red and close on dark green?

Hey guys,  
why is this indicator better than TTM Squeeze?

I'm trying to understand the differences. I feel like the gray crosses appear too late, when the move already happened. Isn't the purpose of the TTM Squeeze to catch a move before it happens? Maybe I use this one wrong, Is there some kind of tutorial?

How do you use it?

Thanks in advance!  
+323 ▲ [Cevap Gönder](#)

**O** [onubhab](#) · Eki 30, 2020

Thanks for this indicator and I checked its really giving very great result . I have one question regarding the momentum value. For the black cross the momentum values are fluctuating and some times it will go in negative value this makes me little confuse about the long or short entry. I would be really very great full if you can clear this doubt.

Zuse...In no way trying to disagree with LazyBear...bc he knows I have all the respect in the world for him...But I paid John C for education for around 10 years and I know the squeeze inside and out. As with 99% of Indicators the Larger the Timeframe the more reliable and Larger the move.  
Think about it. If a squeeze fires off on a 5 min chart you expect the squeeze to last 7 to 12 bars....call it 30 to 45 minutes. Daily chart 7 to 12 bars = 7 to 12 days...Weekly and Monthly chart hold the same...  
One of JC's favorite setups is when both the Weekly and Daily are in a Squeeze...and the Daily Squeeze fires off...it gives you opportunity to get in a move where the weekly might fire off by the time the Daily move ends...so your getting in to a move that will last for weeks to months at the earliest possible time. Same holds through for Daily and 60 min chart both being in a squeeze, or Daily 4 hour etc.  
In summary look for two major timeframes to be in squeeze...this shows price congestion and you get higher probability of larger move. If you're looking at a 5 minute chart...you're going to get a lot of signals...  
Slightly more to it than that....but that will get you started...TIP\*\*\* haven't looked in a while but for some reason Forex/Currencies never worked as good on larger time frames like Daily weekly...they worked on 4 hour or less. Haven't looked in a while so do your own analysis...  
+76 ▲ Cevap Gönder
- L LazyBear WIZARD** · Tem 14, 2014   
Thanks Chris for the info...my "very limited" testing showed more effectiveness on longer time frame too (starting from 4hrs).  
IIRC, that "5mins tf" is from an article I read somewhere (or in a book? Will try to find the reference).

 **ChrisMoody**  · Eyl 13, 2014 ·    
...Change the Squeeze dots to red...and the Non Squeeze dots to Gray...and make the dots Much bigger so it's easier to see.

I can see your monthly is in a Squeeze..I assume your weekly is.

Monthly..and Weekly squeeze could create a big move...once Weekly fires...especially if Monthly fires before Weekly momentum turns to downside.

I typically use on Weekly And Daily Squeezes...The daily squeeze firing should last several days to 2 weeks. Then if the Weekly squeeze fires you're looking at a continued move for several weeks.

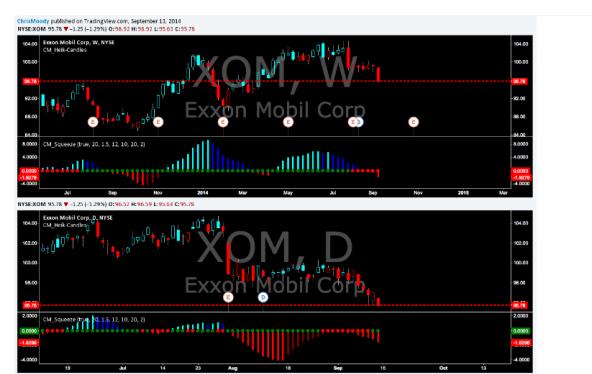

A good Squeeze when it breaks out can go for 10-12 bars with Momentum increasing the entire time (Long Setup). So if you catch the Daily squeeze and then the Weekly squeeze fires off you could be looking at a 2-3 month move.

Another thing to note is you want momentum to be going in same direction on both timeframes when the lower time frame fires. So in a move to the upside you would want your Daily Momentum increasing...and your weekly Momentum increasing. Doesn't matter if the Weekly Mom is below zero...you just want it heading higher.

Hi,  
First of all I would like to thanks you for this great indicator.

I believe there is a sort of a conceptual bug in the code:

```
dev = multKC * stdev(source, length)
should be
dev = mult* stdev(source, length)
```

since it's related to the Bollinger bands calculation

Cheers

 Holden1 · Eyl 23, 2017 

Hi, guys. What mean light-green and red and dark-green and red columns of this indicator?  
+10 ▲ Cevap Gönder

 HoRiz  · Eki 5, 2017 

@Holden1, Did you ever find out the answer to this?  
+8 ▲ Cevap Gönder

 AlexanderSobolev22 · Eki 9, 2017 

@Holden1,  
I believe that those colors to easier identify the directions of the histogram's bars:

light green-rising, dark green- falling  
light red-falling, dark red-rising

So, if you are riding a long position up, it's suggested to get out when light green changes to dark green ( indicator goes down)  
Reverse is true for a short position-get out when light red turns to dark ( indicator goes up)

+13 ▲ Cevap Gönder

 ShashankReddy  · Oca 14, 2018 

@AlexanderSobolev22, Thanks mate.  
+1 ▲ Cevap Gönder

 RunForrestRun · Ağu 20, 2018 

That syntax blows my mind :) How is it possible. If I get mouse over "close" variable I get an explanation: "Current close price, type: float". Hm ok. But how can be this possible:  
smaclose,lengthKC()

how we can calculate SMA if we have just one close value? What a language... :) crazy language :)  
+9 ▲ Cevap Gönder

 dignus PREMIUM · Ağu 19, 2017 cso m

Is it possible within TV to setup an alert when the squeeze releases, the gray cross?

+6 ▲ [Cevap Gönder](#)

 chabos · Eyl 6, 2017 cso m

@dignus, Yes, you need to edit the pinescript to add the alert condition though. The syntax for creating a custom alert condition is "alertcondition(condition, title, message)."

If you're not familiar with pine, condition is the variable linked to the set of conditions that will trigger the alert once activated, title is what the alert will appear as in the alert creation menu, and message is the default message (although you can still change it in the alert creation menu. For condition, in this case you would use sqzOff, since that is what LazyBear named the variable in the code. So pretty much you would view the source code for this indicator, chose the "create copy" option, and in your copy add something to the effect of "alertcondition(sqzOff, 'Squeeze Off', Security has exited squeeze'). You should add this to the end of the code, since it needs to come after sqzOff has been defined.

Also, note that this will not actually create an alert, it just will add the option to create an alert from the normal create alert dialogue.

**C** ChandlerQuintin PREMIUM · Ara 22, 2014 cō ■

This indicator is fantastic - I am having a hard time setting up an alert though. I think it would be very helpful, if I could be alerted each time the bar color changed, for example, from RED to light red, which for me, is where I use this indicator to go long, and from GREEN to light green, which is where I use this indicator to go short. I have been testing this script on AAPL, and I am finding I am paying less attention to the color of the crosses, and more to the bar color and shapes. Any help would be wicked awesome!!! LOVE THIS!

+6 ▲ Cevap Gonder

**L** LazyBear WIZARD · Oca 6, 2015 cō ■

**S** sivajim PRO · Mar 1, 2020 cō ■

Hi all

I have fixed the script error

->'bool' could not be a variable or function name

After fixing this error, many other errors came. I fixed them all.

```
study(shorttitle = "SQZMOM_LB", title="Squeeze Momentum Indicator ", overlay=false)

length = input(20, title="BB Length")
mult = input(2.0,title="BB MultFactor")
lengthKC=input(20, title="KC Length")
multKC = input(1.5, title="KC MultFactor")

useTrueRange = input(defval=true, title="Use TrueRange (KC)", type=input.bool)

// Calculate BB
source = close
basis = sma(source, length)
dev = multKC * stdev(source, length)
upperBB = basis + dev
lowerBB = basis - dev

// Calculate KC
ma = sma(source, lengthKC)
range = useTrueRange ? r : (high - low)
rangema = sma(range, lengthKC)
upperKC = ma + rangema * multKC
lowerKC = ma - rangema * multKC

sqzOn = (lowerBB < lowerKC) and (upperBB > upperKC)
sqzOff = (lowerBB > lowerKC) and (upperBB < upperKC)
noSqz = (sqzOn == false) and (sqzOff == false)

val = linreg(source - avg(avg(highest(high, lengthKC), lowest(low, lengthKC)),sma(close,lengthKC)), lengthKC,0)

bcolor = iff( val > 0, iff( val > nz(val), color.lime, color.green), iff( val < nz(val), color.red, color.maroon))
scolor = noSqz ? color.blue : sqzOn ? color.black : color.gray
plot(val, val, color=bcolor, style=plot.style_histogram, linewidth=4)
plot(0, color=scolor, style=plot.style_cross, linewidth=2)
```

+4 ▲ Cevap Gonder

E elbarto17 · Eyl 10, 2020

@sivaJIm, Hi there. I check your correction and seems to make a better correlation with the KC and shows "less" sqzOff. Also, as you said, tryed to change only the type of bool and everything give me back error. My question is, how significant is the change that people have been using this indicator with that mistake and still been ok?

+▲ Cevap Gonder

E elbarto17 · Eyl 10, 2020

@elbarto17, and 'bool' isn't the class type?

M mtekka PRO+ · May 4, 2019

Should line 17 use "mult" instead of "multKC"? Thank you for sharing this indicator!!

+3 ▲ Cevap Gonder

R RunForrestRun · Ağu 20, 2018

Why do we have here a line:

source = close

What does this line give us? Why don't we just use "close" variable instead of creating new "source" variable which is just a copy of "close" array?

+3 ▲ Cevap Gonder

N Nidalas PREMIUM · Ağu 20, 2018

@RunForrestRun, Probably to be able to change the source easily in all the functions at once. Say you want to use opening of candles instead, then you just have to change source=close into source=open, instead of changing "close" to "open" in all the 4 times it is used

+2 ▲ Cevap Gonder

R RunForrestRun · Agu 20, 2018

@Nidalas, that makes sense, thanks!

T tereano PRO · Haz 11, 2018 cso □  
Hi @LazyBear , multiplier in line 17 should be mult instead of multKC I assume?  
Cause mult variable is intended to be used in BB calc I derive from its title and the variable is nowhere used in the script...  
+1 ▲ Cevap Gönder

T tereano PRO · Haz 11, 2018 cso □  
@tereano, ah sorry forgot I see this is in the update version already fixed.  
+1 ▲ Cevap Gönder

U UnknownUnicorn228809 · May 29, 2018 cso □  
(Sorry for my bad english)  
Hello, what do you think about (2nd) alert?

```
alertcondition(sqzOn, "High Volatily", "High Volatily") //already posted from other users (thanks for this), this alertcondition is active when sqz enter in a high volatily momentum  
alertcondition(bcicolor!=bcolor, "Cambio Direzione", "La direzione del mercato sta cambiando") //this alertcondition is active when previous barcolor is different from the actual barcolor - Example: now barcolor is lime,previous is maroon then alert me, or ... now barcolor is green, previous is lime then alert me.
```

I think that second alert work well. Can anyone test this for to see any possible error? (I have already tested some currency pair and don't have noticed error at the moment).

+1 ▲ Cevap Gönder

U UnknownUnicorn228809 · Haz 2, 2018 cso □  
I'm sorry, there is an error, this work:  
  
alertcondition(bcicolor!=bcolor, "Cambio Direzione", "La direzione del mercato è cambiata")  
  
I had forgotten this: ":" after "bcolor"

▲ Cevap Gönder

**U** UnknownUnicorn2288809 · Haz 12, 2018

I apologize another time. I had problems typing the command (stupid keyboard).  
the correct command is this:

```
alertcondition(bcolor!=bcolor, "Cambio Direzione", "La direzione del mercato è cambiata")
```

**Tom1trader** PRO · Tem 9, 2017

Very nice job, thanks! Years now, after reading "Mastering the Trade", used BB 20, 2 with KC 20, 1,5 overlaid to see squeeze come off with a 5 period Momentum. The ADX here is a nice touch. Keep it up, thanks again and  
Keep Smiling!

+1 ▲ Cevap Gönder

**B** Bewilderbeast · Tem 4, 2017

Hi, LazyBear:

Thanks much for this. Am I correct in thinking that if I wanted to change the color of the CROSSES--I'm having a hard time distinguishing the grey/black from each other--I can edit line 38? And replace black : gray with the colors I want? I realize it's been a loooooooong time since you released this (I'm using V2--I hope!), but if you could confirm that, that would be great. I'll give it a go myself, but I wouldn't mind a bit of confirmation. :-)

Again--many thanks for this and all your fab work.

+1 ▲ Cevap Gönder

very clever Indicator when coupled with multiple time frames and other trending indicators such as an ADX

+1 ▲ Cevap Gönder

**B** Bastiouun · Nis 30, 2015

What do you think about the TD Sequential Indicators from Tom DeMark? Do you think that you could create it on tradingview ? It could be great to have this indicators on tradingview :)

+1 ▲ Cevap Gönder

**LazyBear** WIZARD · May 1, 2015

I haven't personally used TDSeq, but have tried recreating it here (need to go find it in my archive)...

User @glaz was also working on creating it (he usually frequents PineRoom), also IIRC someone else posted this (or a modified form) already too.

▲ Cevap Gönder

**B** Bastiouun · May 1, 2015

Thank you for your reply :)

I know that you have already tried recreating it but unfortunately that is not what I am looking for. I try to find this TD sequential indicator (with TD Setup and TD Countdown) like on these links :

- [mg5.com/en/market/product/7589](http://mg5.com/en/market/product/7589)

- [forex-strategies-revealed.com](http://forex-strategies-revealed.com)

I think TD Sequential Indicator gives great signals to trade, of course it is not perfect as all indicators but it is one of the best (Integrating Stop Loss).

Unfortunately, I did not find the other developer. I am a new member so I do not know everything on Tradingview yet (PineRoom and other).

Thank you very much for your time :)

▲ Cevap Gönder

**W** worldsapart89 · Eki 11, 2017

@LazyBear, Hi LazyBear, I know it's been more than two years, but just wondering if we could see a TD Setup + Countdown indicator from you? The ones that exist today aren't complete. Also, it would be great if you could release another version of SQZMOM with ADX. :) Thanks man, very much love your contributions!

Have a chart showing the issue?

▲ Cevap Gönder

ChandlerQuintin PREMIUM · Oca 9, 2015

Hey LazyBear, Is it me just noticing this now, an error, or something else... Is there a bar now showing on the next advanced bar that hasn't happened yet? For example, I have an 15 and a 60 min chart on \$AAPL right now, and my 9:30-9:45 bar on price chart corresponds with a falling green bar on your indicator, and on my 9:45 to 10:00 bar on price chart, I already see a green falling bar. Same thing on the 60 minute, I have a bar on your indicator that is corresponding with a time that is in... the... future...

Bonjour, comment Je peux utiliser votre Indicateur ?

[▲ Cevap Gönder](#)

 Waldusss · Kas 13, 2021 [cevap](#) [PDF](#)

Hi,

\_If I am not mistaken, 'mult' input is never used.

for BB calculations is used wrongly multKC. So, desviations are not calculated properly.

could you check it?

[▲ Cevap Gönder](#)

Hi Everyone! I wanted to ask a quick question to anyone who may be able to shed some light on certain metrics of this indicator?

I'm down with the main aspects and theory behind the indicator, and how to read it (histogram and the squeeze/release signals) but I'm wanting to get a better grasp of the Metrics in the settings - KC & BB.

Can anyone advise me on the meaning of these settings, and what altering them would/could show?

I'm doing my own research on this currently, but wanted to see if any of your clever minds can add to my research and shed any light?

So, how many billionaires with this indicator? Come on, don't be shy. It's so easy just enter after the squeeze, and that's it. over 74 000 people use it so it must be working. not for me, but for everyone else it must be a real relief to become rich that easy way.

▲ Cevap Gönder

 **raincolle PREMIUM** · Ağustos 20, 2021 [cevap](#) [paylaş](#)

Why does the code include input for "mult" when further down BB Calculation it uses "multKC" to calculate deviation for upper and lower BB? Thought it was a typo on my end and reposted it with "mult" input not "multKC" input. After going back and reviewing your original code I saw that it was not a typo on my part after all, in was meant to be there by you, so why is BB using multKC?

▲ Cevap Gönder

▲ Cevap Gönder

 **LasciviousMonk PRO** · Temmuz 27, 2021 [cevap](#) [paylaş](#)

I believe there is an error in this script. The variable 'mult' is never used, and the value for multKC is used for the Bollinger Bands, instead of the user supplied value.

Unless I am mistaken, line 17 should read:

dev = mult \* stdev(source, length)

It's not a catastrophic error, but it is concerning how this error has ended up in about a dozen other indicators where the authors copied code without fully understanding it. :(

▲ Cevap Gönder

H Himanshu\_trading · Haz 13, 2021 cō □

Hi @LazyBear , i am trying to make it a custom indicator with 5 timeframes in one scripts for the same indicator , could you please help me here that what i am doing wrong and why it is not giving me the exactly same result as compared to what i am getting while opening chart in those actual timeframes :

```
source = close
source1hr = security(syminfo.tickerid, '60', close)
source4hr = security(syminfo.tickerid, '240', close)
sourceD = security(syminfo.tickerid, 'D', close)
sourceW = security(syminfo.tickerid, 'W', close)
basis = sma(source, length)
basis1hr = sma(source1hr, length)
basis4hr = sma(source4hr, length)
basisD = sma(sourceD, length)
basisW = sma(sourceW, length)
dev = multKC * stdev(source, length)
dev1hr = multKC * stdev(source1hr, length)
dev4hr = multKC * stdev(source4hr, length)
devD = multKC * stdev(sourceD, length)
devW = multKC * stdev(sourceW, length)
upperBB = basis + dev
upperBB1hr = basis1hr + dev1hr
upperBB4hr = basis4hr + dev4hr
lowerBB = basis - dev
lowerBB1hr = basis1hr - dev1hr
lowerBB4hr = basis4hr - dev4hr
lowerBBD = basisD - devD
lowerBBW = basisW - devW

// Calculate KC
ma = sma(source, lengthKC)
ma1hr = sma(source1hr, lengthKC)
ma4hr = sma(source4hr, lengthKC)
maD = sma(sourceD, lengthKC)
maW = sma(sourceW, lengthKC)
range = useTrueRange ? r : (high - low)
range1hr = security(syminfo.tickerid, '60', tr)
range4hr = security(syminfo.tickerid, '240', tr)
rangeD = security(syminfo.tickerid, 'D', tr)
rangeW = security(syminfo.tickerid, 'W', tr)
rangema = sma(range, lengthKC)
rangema1hr = sma(range1hr, lengthKC)
rangema4hr = sma(range4hr, lengthKC)
rangemaD = sma(rangeD, lengthKC)
rangemaW = sma(rangeW, lengthKC)
upperKC1hr = ma1hr + rangema1hr * multKC
upperKC4hr = ma4hr + rangema4hr * multKC
upperKCDD = maD + rangemaD * multKC
upperKCW = maW + rangemaW * multKC
lowerKC1hr = ma - rangema1hr * multKC
lowerKC4hr = ma4hr - rangema4hr * multKC
lowerKCD = maD - rangemaD * multKC
lowerKCW = maW - rangemaW * multKC

sqzOn = (lowerBB > lowerKC) and (upperBB < upperKC)
sqzOn1hr = (lowerBB1hr > lowerKC1hr) and (upperBB1hr < upperKC1hr)
sqzOn4hr = (lowerBB4hr > lowerKC4hr) and (upperBB4hr < upperKC4hr)
sqzOnD = (lowerBBD > lowerKCD) and (upperBBD < upperKCD)
sqzOnW = (lowerBBW > lowerKCW) and (upperBBW < upperKCW)

sqzOff = (lowerBB < lowerKC) and (upperBB > upperKC)
sqzOff1hr = (lowerBB1hr < lowerKC1hr) and (upperBB1hr > upperKC1hr)
sqzOff4hr = (lowerBB4hr < lowerKC4hr) and (upperBB4hr > upperKC4hr)
sqzOffD = (lowerBBD < lowerKCD) and (upperBBD > upperKCD)
sqzOffW = (lowerBBW < lowerKCW) and (upperBBW > upperKCW)

noSqqz = (sqzOn == false) and (sqzOff == false)
noSqqz1hr = (sqzOn1hr == false) and (sqzOff1hr == false)
noSqqz4hr = (sqzOn4hr == false) and (sqzOff4hr == false)
noSqqzD = (sqzOnD == false) and (sqzOffD == false)
noSqqzW = (sqzOnW == false) and (sqzOffW == false)
TO BE continued...
```

▲ Cevap Gönder

F Forckoff PRO · Haz 3, 2021 cō □

There is a user input variable called "mult" with the title "BB multifactor" that has a default parameter set to 2.0. Yet in the code where the BB is calculated this variable isn't used. Actually, this variable isn't used at all in the entire script. The multiKC is used to calculate the BB. Just curious if this a typo or not. Thanks

▲ Cevap Gönder

W Walduss · Kas 13, 2021 cō □

@Forckoff, Hi. In my opinion you are right. For me is a typo.

checking the documentation, as standard defined by the author (John Carter's) of this indicator, Deviation for BB should be 2 and for KC should be 1.5 , but this script is using one value for all.

▲ Cevap Gönder

H hocus1 · May 31, 2021 cō □

Is it a bug? In line 17 should be "mult" instead of "multKC".

▲ Cevap Gönder

H hjain1631 · May 20, 2021 cō □

In my experience I think this is for crypto not equity. Because it shows high and low volatility in the market.

▲ Cevap Gönder

K kvitrawn · May 9, 2021 cō □

Damm man,your indicator amazing,nice job

▲ Cevap Gönder

M manomanomano PREMIUM · May 5, 2021 cō □

the script on TV is slightly different to the updated code, the squeeze period differs, is this a mistake or is this correct, the updated script only suggests the change was to do with the BB Mult

- Hi LazyBear and all,
- Thanks for this great info. FYI, I am new to trading and currently I am studying this Squeeze Momentum Indicator in my chart. My main issue that I have now is to screen for stocks that are within this SMI setup. Basically i have set my screener criteria as follow :
- Upper Bollinger Band lower than Upper Keltner Channel  
Lower Bollinger Band above than Lower Keltner Channel  
Upper Keltner Channel above than Upper Bollinger Band  
Lower Keltner Channel below than Lower Bollinger Band
- But it seems that the list of stocks is too little and some them just remains the same for few days.  
I am just wondering if there's any way I could optimize my screener to screen stocks that are within this SMI setup.  
Looking forward to hear from you.  
Thanks!
- Regards,  
Adam

- Hi there...Ive been inept at coding, I wonder how I install the squeeze momentum indicator on my machine? Sorry to be a pain...I guess there isn't a downloadable EX4 file or somesuch is there?
- Thanks so much...love the look of this indicator and would really help me not be such a twit when it comes to my trading.
- LazyBear** [WIZARD](#) · [Haz 8, 2016](#) [Cevap Gönder](#)
- Usually, you just need to "Favorite" a script and it will show up in your favs when you open "Indicators" dialog in a chart.
- Since I have an updated version posted above, try the following steps:
- 1) Open a chart (if you don't have any saved, just create one)
  - 2) Click the "Pine Editor" button at the bottom.
  - 3) Click inside the editor. Select ALL and DELETE. Now, you will have an empty editor pane.
  - 4) Copy the updated indicator source from [pastebin.com/raw/UCpcX8d7](http://pastebin.com/raw/UCpcX8d7)
  - 5) Paste it in to the editor window. Press SAVE.

6) Make sure you can successfully save it.

Now, you have your own copy of the updated source. You can add it to any chart, by opening "Indicators" dialog and going in to "My scripts" and selecting SQZ/MOM\_LB.

how does it works?

▲ Cevap Gönder

**LazyBear** WIZARD · May 1, 2015 [cevap](#) [paylaş](#)

Description below the chart has more info on the usage.

▲ Cevap Gönder

**anthonydelille1** · Sub 19, 2015 [cevap](#) [paylaş](#)

How to install script? please :)

▲ Cevap Gönder

**LazyBear** WIZARD · Sub 19, 2015 [cevap](#) [paylaş](#)

- 1) In a new chart, click on "Pine editor".
- 2) Click on New->BlankScript. Delete the standard template TV populates for you.
- 3) Copy the script from [pastebin.com/UCpcX8d7](http://pastebin.com/UCpcX8d7). Preferably from the RAW section (scroll down in that page).
- 4) Paste it in the PineEditor window.
- 5) Press SAVE. Once successfully saved (no red colored messages in the bottom pane of the Pineeditor dialog), click "Add to chart".

**esaadeh1** · Sub 27, 2015 [cevap](#) [paylaş](#)

Thanks a lot for your work. I have two questions:

1. (Screener): Let me talk about stock here. Your method supposed that we watched a specific stock and wait for squeeze. Is there a possibility to scan by using a free screener for stock which is in the day/week frame squeeze, I mean here your method. Could you for example adjust your script/code to work in stockfatcher.com editable screener.

2. What is the difference between your work and John Carroll work (TTM squeezer)

▲ Cevap Gönder

**LazyBear** WIZARD · Sub 27, 2015 [cevap](#) [paylaş](#)

I replied to your ping in PM.

- 1) Screening feature is going to be released soon by TV.
- 2) It is the same, except for a slight modification to momentum calculation.

+3 ▲ Cevap Gönder

**Seek4learning** · Haz 3, 2017 [cevap](#) [paylaş](#)

@LazyBear, Beautiful work. Thank you!!! Is the screening feature available? If so where?

▲ Cevap Gönder

**Bewilderbeast** · Tem 5, 2017 [cevap](#) [paylaş](#)

@LazyBear, do you know if that screening capability exists? I have 30-50 stocks on my list, and since I am seeking squeezes, right now, I have to go through them each constantly, to manually catch the squeezes and releases. I'm new to TV, and while I see A screener, I don't see a way to use it in conjunction with the SQZMOMO2. Can you tell me how? OR, point me in the right direction,if that capability exists?

TIA,

▲ Cevap Gönder

B 8120626 · Oca 9, 2015

anyone know how to use a variable for the value of transp ? plot pukes when i try a variable, as is shown here in color=scolor. AFAIK there is no INT func :( thanks

▲ Cevap Gönder

LazyBear WIZARD · Oca 10, 2015

When you create a variable in Pine, it becomes a series (unless it is a constant). "transp" cannot take a series. So, you cannot do something like:

```
tp:=close>close ? 50: 90
```

```
bgcolor(blue, transp:tp)
```

because "tp" is a series. But, the following is allowed, because now "tp" is a constant.

```
tp=50
```

```
bgcolor(blue, transp:tp)
```

Hope that helps. BTW, you can also post any query at Pinescript room (link: [tradingview.com/chat/#BfmVowG1TZK0235](http://tradingview.com/chat/#BfmVowG1TZK0235)). Many knowledgeable coders are regulars there.

+1 ▲ Cevap Gönder

B 8120626 · Oca 10, 2015

thanks, i tried everything to set the plot point to transparent, then decided to think outside the box, and realized I could just use the value of na in my series, and no data point would be plotted at that spot, which was my true intention all along. I assumed I could hide the data point by adjusting its transparency. the ps room is neat, but seems not easily searchable, more like a live chat stream, anyhow, this is amazing!

+1 ▲ Cevap Gönder

K KalyanStock · Oca 9, 2015

LazyBear...I use John's squeeze. It is very powerful. Are you using divergence of momentum in conjunction with squeeze to predict direction? It seems very interesting. Can let me know if I am thinking in the right way?

▲ Cevap Gönder

LazyBear WIZARD · Oca 9, 2015

Using divergences + direction of momentum when a sqz releases is definitely a good way to predict release direction.

BTW, this chart shows the difference between what SQZ\_MOM renders and one of the common TTM\_SQZ implementations (there are so many variations out there).

+3 ▲ Cevap Gönder

K KalyanStock · Oca 9, 2015

Thanks for reply. It reinforces my understanding.

One question I had was that my charts and your chart look different with indicators...Can you please why charts are different from yours and what settings I should use?

Sweet!

▲ Cevap Gönder

vlad.adrian · Oca 6, 2015

I just finished the chapter from Carter's book. Im curios how this Indicator compares to his. You said it is derived. What differs? Thank you LB

▲ Cevap Gönder

LazyBear WIZARD · Oca 6, 2015

Yw.

The momentum component (histogram) is different from Carter's simple calculation. Squeeze is the same.

+1 ▲ Cevap Gönder

vlad.adrian · Oca 6, 2015

Oh I see, what indicator is the histogram based on? Why did u change it? Is it more reliable?

▲ Cevap Gönder

LazyBear WIZARD · Oca 7, 2015

OTOH, Carter uses EMA of simple momentum (close - close 'n' bars back). SQZ\_MOM uses a linear regression of anchored momentum. Check "val" calculation (line 32) for more details.
