

Nis 15, 2020 Hello All,

There are many types of SuperTrend around. Recently I thought about a Supertrend based on Pivot Points then I wrote "Pivot Point SuperTrend" script. It looks it has better performance on keeping you in the trend more.

The idea is behind this script is finding pivot point , calculating average of them and like in supertrend creating higher/lower bands by ATR. As you can see in the algorithm the script gives weight to past pivot points , this is done for smoothing it a bit.

As I wrote above it may keep you in the trend more, lets see an example:

As an option the script can show main center line and I realized that when you are in a position, this line can be used as early exit points. (maybe half of the position size)

While using Pivot Points , I added support resistance lines by using Pivot Point , as an option the script can show S/R lines:

And also it can show Pivot Points:

When you changed Pivot Point Period you can see its reaction, in following example PP period is 4 (default value is 2). Smaller PP periods more sensitive trendlines.

Alerts added for Buy/Sell entries and Trend Reversals. (when you set alerts use the option "Once Per Bar Close")

ENJOY!

@LonesomeTheBlue,

Hi, great strategy and code. A simple question, can I plot these levels using a spreadsheet rather than relying on tradingview?

+27 Cevap Gönder

robertttme · Eyl 16, 2021

@LonesomeTheBlue, Hey , how exactly does the Alerts works , lets say if I've AMC on the chart and add the indicator will give me an alert when the supertrend appears without me setting nothing ? And the main question , if I change the stock from AMC to Tesla do I need to do something for the alerts again , or the alerts will sound?

I'd just like to say that this tool is extremely clever and useful if used correctly. Excellent job! I'm not familiar with coding at all, but would it be possible to have a higher time frame super trend within a lower time frame? For example, a 15m super trend into a 5m chart.

+2 Cevap Gönder

tothemoon1613 · Nis 19

@IN\_credible, hey there, Can you give us some example or guides on how to use the script correctly?

Cevap Gönder

- R** rama\_11 · May 30, 2020 · [Cevap Gönder](#)
- Hello @LonesomeTheBlue  
Thank you so much for your amazing job and the effort you put in that.  
I have a quick question (Im pretty new to this world of trading, so it might be a silly one). Let's focus on this part of the script:  
`ph := pivothigh(prd1, prd2)`  
`pl := pivotlow(prd1, prd2)`
- When using the script in real time, is prd2 looking to future's bars?  
If yes, how can we adapt the script to behave in a similar manner (i.e. using prd2>0)?
- Cheers,  
glova
- S** similarSalami18373 · Ağrı 26, 2021 · [Cevap Gönder](#)
- @rama\_11, yes and no. prd2 is looking into future bars, so for past bars, it will look prd2 bars into the future to adjust and find better pivot points. If the current bar is the most recent bar, prd2 is effectively 0 since its not possible to get the next bar until it comes so for live data, you should leave it as is so it will perform better.
- S** similarSalami18373 · Ağrı 26, 2021 · [Cevap Gönder](#)
- @similarSalami18373, Forecast to add. If you dont want to look into the future, set vma can set

```
ph := pivothigh(prd1,0)
pl := pivotlow(prd1,0)
```

S **SkiBums PRO+** · Nis 21, 2020

WOW! This is awesomel I've found pivot points very interesting but thought the levels were too static, but this indicator changes that. The PP center line is a game changing for entering trend trades!

I would be eternuty grateful if you could add a alert for the PP center line, such as crossing down or crossing up.. please please please!

Since finding this indicator I have checked out many of your other scripts... awesome work all around. Followed you and favorited half of your scripts! Will be donating once I start making some \$\$ off that PP center line!!

 Papadaulat PRO · Tem 4, 2020    
Great job. I am trying to filter it with MA from last two months, but failing . Input for MA:

```
len = Input(100, minval=1, title="SMA.Length")
sma_line = sma(close, len)
Reslt should be buy/sell when also agree with MA. Entry & Close set as under, but not working:
b_entry_price = valuewhen(signal, open, 1)
s_entry_price = valuewhen(signal, open, 1)
order_long = crossover(close, sma_line)
order_short = crossunder(close, sma_line)
if (b_entry_price < close)
strategy.entry("long", strategy.long, when = bsignal or (bsignal and order_long))
strategy.close("long", when = ssignal)
if (s_entry_price > close)
strategy.entry("short", strategy.short, when = ssignal or (ssignal and close < sma_line))
```

strategy.close("short", when = bsignal)  
Please help in coding. Thanks.

+2 ▲ Cevap Gonder

 bryan\_aint\_lyin PREMIUM · May 5, 2020 ccc

Would you mind please briefly explaining "ATR Factor" and "ATR Period", and under what conditions we might want to adjust the defaults?

+2 ▲ Cevap Gonder

 LonesomeTheBlue WIZARD · May 6, 2020 ccc

@bryan\_aint\_lyin, supertrend is calculated by using ATR. ATR period is used to get atr value like atr(atr\_period) and atr factor multiplied by this. used to calculate upper/lower line: +- atr(atr\_period) \* atr\_factor.

Thanks for another great script with such a good description. Your work is very much appreciated! I have converted it to a strategy and with a little tweaking of the settings I can get some very good results over lots of different market condition periods. I am wondering if any other HTF filters could further improve the accuracy, but you know what, it seems to do more than good enough on its own!

+2 ▲ Cevap Gonder

 NorthStarDayTrading PREMIUM · Nis 15, 2020 ccc

@Junglistt, What time frames have you backtested through the strategy tester?

+3 ▲ Cevap Gonder

 Junglistt · Nis 16, 2020 ccc

@NorthStarDayTrading, I used Bitstamp BTCUSD because it has a long history, back to about 2016 looking at each year. Also periods of significant rise such as 2017 and fall in 2018. It also performed well recently. It is unusual to find a system that can make a profit in all periods. I prefer to find something that I can automate to take away my emotions which always screw things up! 😊 The only negative seems to be 30-40% drawdown in some periods which would take a lot of nerve to stick with.

+2 ▲ Cevap Gonder

 rrr123456 · Nis 24, 2020 ccc

@Junglistt, I am just learning how to code in pine editor. Would you be kind enough to send me the strategy? I am having a hard time changing this indicator into a strategy in order to backtest it. I'd greatly appreciate it

+1 ▲ Cevap Gonder

 Jacryptoking · Ara 14, 2020 ccc

The trend indicator can be very powerful for trend trading but need to have a bit of work.. Key when coding make the alerts and signals be the close price.

Eg. For a sell signal , Make a close below the ATR line that close below you would have a line drawn in and label sell ..

+1 ▲ Cevap Gonder

 Jacryptoking · Ara 14, 2020 ccc

The sell and Buy alert comes on when the candle is active .

As a trader you must be trading trading the close price.

So that need to be corrected to have a close below the green line. Also can you have the level as HH (higher high) for the extreme swing point and within the range just H (high) .. opposite for lower low ..

Can u also have a label option for the week , daily and month swing points?

Hi, I am new to trading and programming and have been searching for a trading methodology for months. This indicator seems to be what I have been looking for. Is it possible to convert it to a strategy?

**T** **TennysonShelz** · Mar 26

this is a great indicator, but I wanted to suggest, can you script in an option of using a certain timeframe on a different time frame, for example lets say I want to use the 2h pivot supertrend on the 30 minutes, I want an option that I will still see the 2h pivot supertrend even though Im on the 30 minutes time frame. I hope this makes sense and you see my comment

@LonesomeTheBlue , this is simply superb work!

Quick question.

Is it possible to combine the signals from two different time frames, let's say, 1 min and 3 min for a more congruent signal? (Seems like 1 min gives an earlier signal, but 3 min keeps you in the trade longer, just something against pullbacks).

Cheers!

 **ghi4a** · Eki 8, 2021 [cevap](#) [paylaş](#)

Hi @LonesomeTheBlue

Thank you very much for a great work.

I have a question about this part of code:

```
if lastpp  
if na(center)  
center := lastpp  
else  
center := (center * 2 + lastpp) / 3
```

What happening if lastpp == na? I thought the center should just stay na but its values are real numbers in every bar.

I cant grasp the logic and track this moment during debugging...

Thank you in advance!

- Only problem i see with this is freaky highs & lows being taken as pivots But one can base the pivots themselves on hlc3 rather than default high & low as the source And off course the signals will come a while later than normal supertrend (particularly on higher tfs) Centerline decent compromise and one can always add a std 2-3 ATR line
