

Nov 8, 2021 Hello All,

For Long time I was planning to make **Support/Resistance Channels** script, finally I had time and here it is.

#### How this script works?

- It finds and keeps [Pivot Points](#)
- when it found a new [Pivot Point](#) it clears older S/R channels then;
- for each [pivot point](#) it searches all [pivot points](#) in its own channel with dynamic width
- while creating the S/R channel it calculates its strength
- then sorts all S/R channels by strength
- it shows the strongest S/R channels, before doing this it checks old location in the list and adjust them for better visibility
- if any S/R channel was broken on last move then it gives alert and put shape below/above the candle
- The colors of the S/R channels are adjusted automatically

#### You can set/change following settings:

- Pivot Period
- Source: High/Low or Close/Open can be used
- Maximum Channel Width %: this is the maximum channel width rate, this is calculated using Highest/Lowest levels in last 300 bars
- Number of S/R to show: this is the number of Strongest S/R to show
- Loopback Period: While calculating S/R levels it checks Pivot.Points in LoopBack Period
- Show S/R on last # Bars: To see S/R levels only on last N bars
- Start Date: the script starts calculating [Pivot Point](#) from this date, the reason I put this option is for visuality. Explained below
- You can set colors/transparency
- and You can enable/disable shapes for broken S/R levels

#### Examples:

You can change colors as you wish:

here "Show S/R on last # Bars" set 100:

Sometimes visuality may corrupt because of old S/R levels, to solve it you need to set "Start Date" in the options to start the script in visual part (last 292 bars) here in first screenshot it doesn't look good (shrink), then on second screenshot I set the "Start Date" it looks better, if you change time frame don't forget to set it again :)

Enjoy!

Nis 8, 2021 • **Sürüm Notları:** typo fixed in the options

Nis 15, 2021 • **Sürüm Notları:** "Check the Date or Bars to Start" option added. It has two options under it: "Bars", "Date". so you can start the script on a specified date or on last Nth bar (ex: last 400 bars). "Bars" option only works on 1min or higher time frames.

"Show Weak S/R levels" option added. by default it's enabled. If you disable it then only the S/R channels/zones that contains at least 2 Pivot Points are shown.

Eyl 27, 2021 • **Sürüm Notları:** The algorithm improved and renewed.  
new box() feature used instead of fill() and plot().  
2 moving averages added. you can change types and lengths.

If you see anything to improve and a bug in it then let me know please.

Eki 4, 2021 • **Sürüm Notları:** updated

Hi,

Hi,

would it be possible to create two new alarms? Price in resistance and price in support? Maybe someone knows what code I have to insert there?

Stumbled on your Indicator from one of my users comments! I love the look of it and how clean your script is.  
I was wondering/hoping we could have an idea exchange. I'd like to incorporate your concept of ranking S/R levels into one of my indicators:

I'm having a difficult time following along with your approach however. Seems you have a kind of pseudo-multi dimensional array going on?  
I can offer up my approach in using MTF candle data for use with Line and Box plotting (used in the script I linked above)

Cheers, EFX

- Suggestion: try modify the box to only highlight the bars that are being taken in to account. So change the box.new as follows:  
box.new(left = bar\_index - loopback, extend = extend.right,  
It would be even better if the box started at the first pivot in the channel, but I couldn't work out how to get that from the pivotloc array.
- E** **EltAlt** PREMIUM · May 19 [Cevap Gönder](#)
- Love the script!  
Just a query, ChannelW has a maxval of 8, but in SRv2 ChannelW has a defval of 10. I was trying to compare the two and this hindered the comparison, any reason the limit is so low in this channels version?
- C** **Cryptovoyage** PRO · May 15 [Cevap Gönder](#)
- First of all, great work on the amazing indicator! Just wanted to confirm if the line thickness denotes the strength of support/resistance and how the grey channel works. Many thanks for any guidance, cheers.

- T** **talkatheer11** PRO · Nis 10 [Cevap Gönder](#)
- Hello, thank you so much for the great script! your work is truly incredible. I think it would be a nice addition to add the price levels similar to your Support Resistance - Dynamic v2 script
- e** **eltonlaw** PREMIUM · Nis 9 [Cevap Gönder](#)
- Dear Expert, is there a way that can detect pivot high may equal to previous pivot low or vice versa? This can spot out previous resistance becomes current support or previous support is now current resistance. Like your last chart (Bitcoins/TetherUS1). Low at 10:30 was support but later became resistance at high on 12:10
- J** **JoelK1** PRO · Nis 8 · iOS İçin TradingView [Cevap Gönder](#)
- Love the Indicator! Wondering what is the difference between Pivot Period and Loopback Period?

▲ Cevap Gönder

JasperVanhave **Premium** · Eyl 28, 2021 [cevap](#) [film](#)

Hey  
Very nice script thank you. Maybe a feature later on instead of using the chart data there could be a setting to let us chose the timeframe on which the script is calculated on. In that way we could for example look on the hr chart with the S/R levels based on the daily TF (data).

Thanks for the sharing.

However, could you tell me if this indicator has repaint?

Because I made "broken resistance" alert to buy.

And I found there was no broken resistance signal(triange) on the chart but the alert occurred.

Is there a way to get an alert after more watching the support line/resistance line more?(like make signal after 3-4 minute later)

I'm using a 15-minute chart now.

▲ Cevap Gönder
