May 1 Hello All,

There are built-in and published Pivot Point High Low Indicators in Public Library but as far as I see none of them is for Higher Time frames. so I decided to write & publish this script. I hope It would be useful while trading or developing your own scripts. I also did this to use in one of my future projects (we will see it in a few weeks/months ;)).

I tried to make all settings optional, so you can play with them as you wish.

P.S. There is no control mechanism if the chart time frame is lower than the time frame in the options. So you better set higher time frame in the options than the chart time frame.

Enjoy!

Seems to repaint when you turn this into a strategy.

Happened when I converted the study into a strategy and included the 4 lines below

```

if pivotlow
strategy.entry('long', strategy.long)
if pivothigh
strategy.entry('short', strategy.short)

@DynamicSignalLab, try "if pivotlow and barstate.isconfirmed"
idk if this helps but worth a try

@DynamicSignalLab, didnt work, I tried

@DynamicSignalLab, I believe the "repainting" is due to barmerge. lookahead on line. It is useful for some scripts but gives a side effect of giving "future calculations" in backtesting, so be careful and keep this in mind on how barmerge. lookahead_on affects backtesting results if it is on and you are checking back testing.

THIS IS GREAT
@LonesomeTheBlue
is there away to make Alerts for this?

Cevap Gönder

LonesomeTheBlue WIZARD · May 1

Hello All, The Indicators in Pivot Points are laggy, so we better use them while calculating S/R levels, trend lines etc or while analyzing the symbols

@LonesomeTheBlue,
yes thats fine but how would we make an alert for them?
