Hi, Kaufman is a great indicator. It is works on all asset class. I am applying it on Index / Stocks & Commodities. I do apply 200 EMA along with KAMA, It is indeed a deadly combination. When the KAMA crosses 200 EMA from the downside to up, the price accelerate fast. And it gives excellent upward momentum. That is, when the KAMA is below the 200 EMA. And when KAMA is above the 200 EMA, price gives fast downside momentum. My humble request to you, if you can add 1 box of EMA in the input of KAMA Indicator settings, it will be very help full. One has to apply only 1 indicator on the chart. Please check at your end.

Thank you. 

Milind.
